Re: Global Productions Solutions, ("GPS")

To Whom It May Concern:

Beard Oil has had the pleasure of working with GPS since May of 2011. We were encountering a great deal of issues with our surface and down-hole equipment at our Dilworth Field in Kay County Oklahoma. We were very frustrated with the performance issues with our equipment and the costs related to repair and production loss.

After our initial contact, GPS made numerous trips to our field in an effort to understand our equipment and our operations approach. They performed a thorough evaluation of our infrastructure as well as the dynamics of our reservoir and our operational goals. After completion, they met with our operations Team and made their recommendations. They provided a solutions based proposal on how their company could work with Beard to improve our results.

GPS provided their employees continuing education support that would allow their staff to better service our surface equipment. In addition, they designed a horizontal pumping system that has optimized our disposal capabilities. They have been very responsive to our needs and provided solutions in areas where their competitors were unsuccessful. The result of their efforts has been extended run times that were not previously experienced.

I would highly recommend GPS to your company and would be happy to discuss with you our experience at a time of your convenience.

Sincerely,

BEARD OIL COMPANY
